### About Flexcity

Flexcity is a demand response aggregator and a market leader in Belgium and other European countries. Flexcity's core business is to support the balance of the electricity grid by operating its large portfolio of flexible, fully automated assets. Flexcity's portfolio consists of a wide range of technologies, such as batteries, decentralized generation and large industrial processes. Flexcity also integrates renewable energy sources into its portfolio, opening up new revenue streams for emerging technologies.

Flexcity supports many industrial companies in reducing their total electricity procurement costs. Our company is a frontrunner in energy innovation. As a member of the team, you will contribute to a sustainable low-carbon energy sector. You will also come into contact with numerous innovative and state-of-the-art technologies, such as Internet of Things (IoT) and machine learning.

## Your role

Flexcity is looking for a Demand response market analyst. You will join a dynamic team that is committed to the energy transition, and in which you will immediately be given your own responsibilities. On the basis of the technical data that you will receive and taking into account the current market conditions, you will calculate the flexible power potential of industrial customers. You win the customer's trust by making clear assumptions about the industrial process, and convince the customer with quality studies. You work closely with your colleagues Technical Account Managers, who are in direct contact with the customers. Together, you translate the detailed studies into an easily understandable proposal for the customer. Your communication skills (written and oral) are therefore just as important as your analytical skills!

In addition, you will be involved in the day-to-day valorisation of Flexcity's portfolio on the reserve markets. You will contribute to the strategic bids. In doing so, you scrupulously apply the rules of the system operator Elia and take into account the market conditions (imbalance prices, etc). A good knowledge of the Belgian energy market or a profound interest in this topic is therefore a must.

Finally, after a training programme, you will become our expert in flexibility products, participating in workgroups with Elia about the development of the market.

## Your skills and profile

- Strong analytical skills, with a high interest for data management
  - You are customer oriented: you think from the customer's perspective
  - Proactive approach and strong sense of responsibility
  - Technical interest in new technologies and passion for energy are a must. ●
- Fluent in English and Dutch or French. Any other language is a plus.
- You have a master's degree, preferably in engineering.
  - You are flexible, not afraid to think outside the box and you love to share your knowledge. ●
- You are results-oriented with a pragmatic and professional attitude.
- You are a team player with a "can do" mentality
  - Strong written and oral communication skills, both internally and externally

## Your responsibilities

- For new sites, assess the flexibility characteristics of the installations.
- Based on the flexibility characteristics and our current portfolio, evaluate the value and risks that the sites could add to the portfolio.
- Together with the technical account manager, draw up technical proposals for new and existing clients and provide technical support
- Assist with the integration of the assets into our portfolio
- You offer client support and communicate directly with our clients
- You become the flexibility product specialist, internally and externally

## Our offer

- You will be working in an enthusiastic team within an informal company culture. ● You play an active role in the energy transition, as flexible assets work hand in hand with renewables.
- We offer an attractive salary package.
- We stimulate innovation in new Energy services and inspire through interesting projects. ● We support training opportunities.
- We encourage (inter)national mobility and flexible working hours.
- We create a sense of community through team events
